October 01, 2002, North Tonawanda, NY (USA) – Ziphany, LLC, a provider of Energy monitoring/verifications systems, announces the receipt of over \$380,000.00 on behalf of their customers to encourage New York State businesses to participate in energy reduction and/or curtailment activities. Businesses applying for these funds were able to offset the majority of the costs associated with installing interval metering at their facility. Interval metering devices provide better insight into when, where and how companies are consuming utilities, and provide verification whereupon a facility actually participates in paid reduction programs.

Brian Palka, COO of Ziphany, commented, "Being one of only a handful of certified MDSP's in New York State, our customers benefit not only from the numerous uncovered ways to save energy, but from the ability to submit certified proof of this participation as well."

Ziphany continues to lead the industry in meeting and exceeding customer requests; most recently Ziphany hardware has been able to provide "limited" control. Thus creating a variety of scenarios resulting from coordination of Now-Time™ data collection, alarming and pricing information.
