January 2003, North Tonawanda, NY (USA) – Ziphany, LLC, a provider of Energy monitoring/verifications systems, announces the addition of radio-frequency capability to their existing Now-Time™ data collection and transmission technologies. Ziphany received an FCC licensed frequency permitting wireless data transmission is now providing service to their customer base without the requirement of local connections to the internet.

Brian Palka, COO of Ziphany, stated, “Ziphany continually strives to remain industry leader in not only data presentation but data collection as well. This new radio frequency device facilitates this and is already being deployed to our customers”

The customers currently utilizing this technology have provided rave reviews at not only the reliability of the devices but the ease at which they were installed as well.

Tim Mattulke Director of Business Development for Ziphany stated, “This new wireless Z-Box provides options to many customers where local area networks either do not exist or are cost prohibitive to extend or install. Several projects that until this point, were determined to be cost prohibitive are now being reviewed. In most cases, Ziphany is able to meet the customers monitoring needs through radio frequency technology, well below the costs of existing hardwired methods.”
