Publication date: 2003-02-01

January 2002, North Tonawanda, NY (USA) – Ziphany, LLC, a provider of Energy monitoring/verifications systems, announces the receipt of over \$120,000 to fund two separate projects to both enhance Ziphany's core technology and assist NYS electric customers in reducing energy costs. Ziphany will utilize this funding to offset the costs associated with completing the final phase of their advanced web-enabled control features. This control will be tied into the existing Ziphany technology and will permit the user to make more immediate decisions based upon preset parameters. Ziphany also received an additional grant to help customers create energy saving strategies utilizing Ziphany's core monitoring technologies.

Vince LaFratta, CTO of Ziphany, stated, "This funding will accelerate the completion of our advanced web-enabled control functionality. This feature enhances our current product by permitting more immediate responses to market conditions. It is our vision that such Now-Time™ responses will result in direct energy and cost savings for our customers."

Ziphany continues to lead the industry in meeting and exceeding customer requests; most recently Ziphany has upgraded their website, integrating a wide variety of user feedback and resulting in a more user friendly interface to access and view data.
