November 18, 2003, Buffalo, NY (USA) - Ziphany, LLC, a provider of Energy monitoring/verification systems and open-ended communication platforms, received a great deal of interest at the World Energy Engineering Congress (WEEC) and High Performance Facilities Expo in Atlanta, Georgia in early November. Interested parties ranged from universities and municipalities to manufacturers and consultants, located all over the world.

The annual WEEC show is hosted by the Association for Energy Engineers and played host to over 130 exhibitors and well over 3000 attendees offering seminars and technical information to individuals involved in energy from around the world.

Tim Mattulke VP Business Development Ziphany, commented, "The attendees were very well educated on the value of information and quickly recognized the benefits of weaving a low cost solution like Ziphany into their long term energy reduction programs. Our product fits well into every situation, offering a cost effective and scalable solution to energy monitoring needs."

Ziphany provides an open-ended communications platform that permits data acquisition from multiple hardware devices and existing building management systems. These data are then transferred to Ziphany's secure website where presentation applications can be utilized to view information to help reduce operational costs.
