

## ENERGY INFORMATION SYSTEMS

The third highest cost of doing business in today's environment is the cost of energy. Companies that monitor their energy usage, can reduce their operating costs and increase their margins by just understanding how and when to operate their facilities.

Ziphany's Energy Applications offer Online tools that allow companies to better understand their energy requirements.

Our Now-Time™ technology enables immediate online access to critical energy data. Ziphany provides graphical presentation of both energy usage and the current pricing information that drive your facility's operational costs.

With Ziphany's suite of Energy Applications, you will have the tools to understand how your facilities consume energy, when a facility is out-of-specification and the costs associated with your energy usage.

### **Data Collection & Integration**

Provides a flexible and cost effective platform for the collection and delivery of energy information from all of your locations or your customers' locations.

### **Energy Analysis**

Provides a user-friendly web-based platform for reviewing and analyzing your energy information.

### **Alarming & Notifications**

Provides an easy-to-configure application that can alert appropriate individuals at the moment specific energy-related events happen.

### **Energy Pricing**

Provides user-friendly web-based data repository of energy prices.

### **Weather**

Provides a repository of weather data like temperature and humidity.

### **Demand Response / Curtailment**

On-line tools that provide information regarding customer performance during Demand Response Events.

### **Scheduled Reporting**

Provides an engine to schedule reports for automatic delivery at user requested times.
