The Energy Operations Platform

To enable aggressive business growth while bolstering bottom-lines

There are lots of components that work together to run your business. Imagine what it would do for your operation... if they actually worked together.

Introducing ZEOP

A comprehensive, Microsoft-based platform – hosted or internet-based – for any energy company looking to streamline operations, facilitate internal communications, and scale their energy business.

Scalable

- Most energy operations are built on and organized with smaller, home-grown systems, constraining for growing businesses.
- This easily integrated platform is infinitely scalable.

Compliance is Key

- Market rules, and even LDC rules within each market, differ and change periodically. Keeping up is difficult and time consuming.
- To do so, EOP is updated regularly, updates delivered automatically.

Regionally Versatile

- Many applications require extensive modifications to function in multiple regions/LDC, but EOP was designed to support multiple regions/LDC via manipulation of simple setup options.
- For larger requirement fulfillment, EOP can be extended accordingly.

Built on Proven System

- EOP is built on Microsoft's established Dynamics NAV and is considered the industry-standard for many business operations.
- Ubiquitous platform!

Commitment to Growth

- Our dedicated development team has many years of energy expertise and a long-term roadmap for the product.
- Unlike many software products that are simply patched to keep up with requirements, Ziphany products have a development roadmap.
- For EOP, this plan includes supporting *all* deregulated market areas.

Efficiency = Profit

- Better Forecasting tools lead to better buying decisions, which in turn improve profit margins.
- Quickly turned around 810/Billings keep cash flow high.

Product Offerings:

ZEIP

Energy Information Platform

ZDRP

Demand Response Platform

Auto-DR

Automated Demand Response Controls
